19. 다음 글에 드러난 Sophie의 심경 변화로 가장 적절한 것은?

The whole morning had been chaotic. Sophie's day began with her alarm clock failing to ring, which had thrown her into an intense rush. After terrible traffic, her taxi finally arrived at the airport, where she was met with endless security lines. Sophie kept glancing at her watch with each second feeling like an hour. Worried that she could not get to the boarding gate in time, she rushed through the crowds of people. Just then, she heard an announcement saying that her flight had been "delayed." Letting out a deep sigh, she finally felt at ease. With an unexpected hour to spare, she would have time to relax and browse the airport shops before her journey.

- ① calm → delighted ② pleased → indifferent
- ③ anxious → relieved ④ joyful → disappointed
- ⑤ bored → satisfied

Truth is essential for progress and the development of knowledge, as it serves as the foundation upon which reliable and accurate understanding is built. However, one of the greatest threats to the accumulation of knowledge can now be found on social media platforms. As social media becomes a primary source of information for millions, its unregulated nature allows misinformation to spread rapidly. Social media users may unknowingly participate in creating and circulating misinformation, which can influence elections, cause violence, and create widespread panic, as seen in various global incidents. As creators and consumers, it is our responsibility to take on a greater role in the enhancement of fact-checking protocols in order to ensure accuracy. It is critical that participants safeguard the reliability of information, supporting a more informed and rational public community.

- ① 소셜 미디어 플랫폼을 운영할 때 사용자의 의견을 반영해야 한다.
- ② 디지털 창작물의 저작권 보호에 관한 사회적 합의를 도출해야 한다.
- ③ 소셜 미디어 사용자는 정보의 정확성과 신뢰성 확보를 위해 힘써야 한다.
- ④ 광범위한 지식을 축적하기 위해 다양한 정보의 유통을 촉진해야 한다.
- ⑤ 소셜 미디어 기업은 개인 정보 보호를 위한 대책을 세워야 한다.

21. 밑줄 친 from their verandas가 다음 글에서 의미하는 바로 가장 적절한 것은?

Around the turn of the twentieth century, anthropologists trained in the natural sciences began to reimagine what a science of humanity should look like and how social scientists ought to go about studying cultural groups. Some of those anthropologists insisted that one should at least spend significant time actually observing and talking to the people studied. Early ethnographers such as Franz Boas and Alfred Cort Haddon typically traveled to the remote locations where the people in question lived and spent a few weeks to a few months there. They sought out a local Western host who was familiar with the people and the area (such as a colonial official, missionary, or businessman) and found accommodations through them. Although they did at times venture into the community without a guide, they generally did not spend significant time with the local people. Thus, their observations were primarily conducted from their verandas.

* anthropologist: 인류학자 ** ethnographer: 민족지학자

- ① seeking to build long-lasting relationships with the natives
- ② participating in collaborative research with natural scientists
- ③ engaging in little direct contact with the people being studied
- ④ cooperating actively with Western hosts in the local community
- ⑤ struggling to take a wider view of the native culture examined

Even though there is good reason to consider a dog a sentient being capable of making choices and plans — so that we might suppose ‘it could have conceived of acting otherwise’ — we’re unlikely to think it is wicked and immoral for attacking a child. Moral responsibility is not some universal concept like entropy or temperature — something that applies equally, and can be measured similarly, everywhere in the cosmos. It is a notion developed specifically for human use, no more or less than languages are. While sentience and volition are aspects of mind and agency, morals are cultural tools developed to influence social behaviour: to cultivate the desirable and discourage the harmful. They are learnt, not given at birth. It’s possible, indeed likely, that we are born with a predisposition to cooperate with others — but only within human society do we come to understand this as *moral* behaviour.

* sentient: 지각력이 있는 ** volition: 의지

- ① 도덕성은 자신의 선택에 대해 책임을 진다는 개념이다.
- ② 동물과 인간을 구별하는 중요한 특징은 분별력과 언어이다.
- ③ 도덕성은 학습되는 문화적 도구로서 인간 사회에만 나타난다.
- ④ 동물과 인간은 공통적으로 다른 개체와 협력하는 경향이 있다.
- ⑤ 문화적 도구로서의 도덕성은 개체의 의사 결정에 영향을 미친다.

It is much more natural to be surprised by unusual phenomena like eclipses than ordinary phenomena like falling bodies or the succession of night into day and day into night. Many cultures invented gods to explain these eclipses that shocked, frightened, or surprised them; but very few imagined a god of falling bodies — to which they were so accustomed that they did not even notice them. But the reason for eclipses is ultimately the same as that of the succession of night and day: the movement of celestial bodies, which itself is based on the Newtonian law of attraction and how it explains why things fall when we let them go. For the physicist, understanding the ordinary, the habitual, and the frequent thus allows us to account for the frightening and the singular. As such, it was thus necessary to ask “Why do things fall?” and to have Newton’s response to understand a broad range of much more bizarre phenomena occurring at every level of the universe.

* eclipse: 일식, 월식 ** celestial: 천체의 *** bizarre: 이상한

- ① widespread preference for mythical explanations over scientific ones
- ② limitations of Newtonian law in explaining eclipse phenomena
- ③ influence of scientific interpretations on perceptions of reality
- ④ need to pose questions about the usual to understand the unusual
- ⑤ difficulty of drawing general conclusions from unusual phenomena

There are good reasons why open-office plans have gained currency, but open offices may not be the plan of choice for *all* times. Instead, the right plan seems to be building a culture of change. Overly rigid habits and conventions, no matter how well-considered or well-intentioned, threaten innovation. The crucial take-away from analyzing office plans over time is that the answers keep changing. It might seem that there is a straight line of progress, but it’s a myth. Surveying office spaces from the past eighty years, one can see a cycle that repeats. Comparing the offices of the 1940s with contemporary office spaces shows that they have circled back around to essentially the same style, via a period in the 1980s when partitions and cubicles were more the norm. The technologies and colors may differ, but the 1940s and 2000s plans are alike, right down to the pillars running down the middle.

26. György Kepes에 관한 다음 글의 내용과 일치하지 않는 것은?

György Kepes was an artist and educator born in Selyp, Hungary in 1906. He studied painting at the Royal Academy of Fine Arts in Budapest, Hungary. Then, he studied design and film in Berlin, Germany. He went to the United States in 1937, and about a decade later, he started teaching visual design at the Massachusetts Institute of Technology (MIT). He founded the Center for Advanced Visual Studies at MIT to form a community composed of artists and scientists. His exhibition in 1951 titled *The New Landscape* became the basis of his book *The New Landscape in Art and Science*, which was published several years later. In the book, he presented images that were not previously available, captured by the latest scientific devices. In 1995, a museum to house his works was established in Eger, Hungary. He was a great pioneer in connecting art and technology.

- ① 헝가리에서 그림을 공부했다.
- ② 1937년에 MIT에서 시각 디자인을 가르치기 시작했다.
- ③ 그의 전시회를 기반으로 책이 출판되었다.
- ④ 그의 작품을 소장하기 위한 박물관이 설립되었다.

33. City quality is so crucial for optional activities that the extent of staying activities can often be used as a measuring stick for the quality of the city as well as of its space. Many pedestrians in a city are not necessarily an indication of good city quality — many people walking around can often be a sign of insufficient transit options or long distances between the various functions in the city. Conversely, it can be claimed that a city in which many people are not walking often indicates good city quality. In a city like Rome, it is the large number of people standing or sitting in squares rather than walking that is conspicuous. And it's not due to necessity but rather that _____. It is hard to keep moving in city space with so many temptations to stay. In contrast are many new quarters and complexes that many people walk through but rarely stop or stay in.

* pedestrian: 보행자 ** conspicuous: 눈에 띄는

- ① the city quality is so inviting
- ② public spaces are already occupied
- ③ public transportation is not available
- ④ major tourist spots are within walking distance
- ⑤ the city's administrative buildings are concentrated

34. That people need other people is hardly news, but for Rousseau this dependence extended far beyond companionship or even love, into the very process of becoming human. Rousseau believed that people are not born but made, every individual a bundle of potentials whose realization requires the active involvement of other people. Self-development is a social process. Self-sufficiency is an impossible fantasy. Much of the time Rousseau wished passionately that it were not: *Robinson Crusoe* was a favorite book, and he yearned to be free from the pains and uncertainties of social life. But his writings document with extraordinary clarity _____. “Our sweetest existence is relative and collective, and our true *self* is not entirely within us.” And it is kindness — which Rousseau analyzed under the rubric of *pitié*, which translates as “pity” but is much closer to “sympathy” as Hume and Smith defined it — that is the key to this collective existence. [3점]

* yearn: 갈망하다 ** rubric: 항목

- ① the necessity of philosophical study to understand human nature
- ② the development of self-sufficiency through literary works
- ③ the shaping of the individual by his emotional attachments
- ④ the making of the self-reliant man through his struggles
- ⑤ the difficulty of trusting other people wholeheartedly

The best dealers offer a much broader service than merely having their goods on display and ‘selling from stock’. Once they know the needs of a particular collector they can actively seek specific items to fill gaps in the collection. ① Because it is their business, to which they devote themselves full-time, they will inevitably have a much wider network than any non-professional collector can ever develop. ② As a matter of course they can enquire about the availability of pieces from dealers in other cities and, most crucially in some categories, from overseas. ③ They will be routinely informed of news of all auctions and important private sales, and should be well-enough connected to hear occasionally of items which are not yet quite on sale but might be available for a certain price. ④ The main advantage of buying from a dealer is getting personalised service on your purchases. ⑤ In turn, they can circulate their own contacts with ‘want-lists’ of desired items or subjects, multiplying their client collectors’ chances of expanding their collections.

If learning were simply a matter of accumulating lists of facts, then it shouldn't make any difference if we are presented with information that is just a little bit beyond what we already know or totally new information.

- (A) If we are trying to understand something totally new, however, we need to make larger adjustments to the units of the patterns we already have, which requires changing the strengths of large numbers of connections in our brain, and this is a difficult, tiring process.
- (B) The adjustments are clearly smallest when the new information is only slightly new — when it is compatible with what we already know, so that the old patterns need only a little bit of adjustment to accommodate the new knowledge.
- (C) Each fact would simply be stored separately. According to connectionist theory, however, our knowledge is organized into patterns of activity, and each time we learn something new we have to modify the old patterns so as to keep the old material while adding the new information. [3점]

The generally close connection between health and what animals want exists because wanting to obtain the right things and wanting to avoid the wrong ones are major ways in which animals keep themselves healthy.

- (A) They can take pre-emptive action so that the worst never happens. They start to want things that will be necessary for their health and survival not for now but for some time in the future.
- (B) Animals have evolved many different ways of maintaining their health and then regaining it again once it has been damaged, such as an ability to heal wounds when they are injured and an amazingly complex immune system for warding off infection.
- (C) Animals are equally good, however, at dealing with injury and disease before they even happen. They have evolved a complex set of mechanisms for anticipating and avoiding danger altogether.

If not, the robot might endlessly chase itself rather than the blocks.

People involved in the conception and engineering of robots designed to perceive and act know how fundamental is the ability to discriminate oneself from other entities in the environment. Without such an ability, no goal-oriented action would be possible. (①) Imagine that you have to build a robot able to search for blocks scattered in a room in order to pile them. (②) Even this simple task would require that your machine be able to discriminate between stimulation that originates from its own machinery and stimulation that originates from the blocks in the environment. (③) Suppose that you equip your robot with an artificial eye and an artificial arm to detect, grab, and pile the blocks. (④) To be successful, your machine will have to have some built-in system enabling it to discriminate between the detection of a block and the detection of its own arm. (⑤) Your robot would engage in circular, self-centered acts that would drive it away from the target or external goal.

Unfortunately, at the scales, accuracy, and precision most useful to protected area management, the future not only promises to be unprecedented, but it also promises to be unpredictable.

To decide whether and how to intervene in ecosystems, protected area managers normally need a reasonably clear idea of what future ecosystems would be like if they did not intervene. (①) Management practices usually involve defining a more desirable future condition and implementing management actions designed to push or guide ecosystems toward that condition. (②) Managers need confidence in the likely outcomes of their interventions. (③) This traditional and inherently logical approach requires a high degree of predictive ability, and predictions must be developed at appropriate spatial and temporal scales, often localized and near-term. (④) To illustrate this, consider the uncertainties involved in predicting climatic changes, how ecosystems are likely to respond to climatic changes, and the likely efficacy of actions that might be taken to counter adverse effects of climatic changes. (⑤) Comparable uncertainties surround the nature and magnitude of future changes in other ecosystem stressors. [3점]

Human speech differs from the cries of other species in many ways. One very important distinction is that all other animals use one call for one message as the general principle of communication. This means that the number of possible messages is very restricted. If a new message is to be included in the system, a new sound has to be introduced, too. After the first few tens of sounds it becomes difficult to invent new distinctive sounds, and also to remember them for the next time they are needed. Human speech builds on the principle of combining a restricted number of sounds into an unlimited number of messages. In a typical human language there are something like thirty or forty distinctive speech sounds. These sounds can be combined into chains to form a literally unlimited number of words. Even a small child, who can communicate by only one word at a time, uses a system for communication that is infinitely superior to any system utilized by any other animal.

In animal cries, each call ___(A)___ a different message, which limits the number of possible messages, whereas human language creates an unlimited number of messages using a ___(B)___ set of distinctive sounds.

People are correct when they feel that the written poetry of literate societies and the oral poetry of non-literate ones differ considerably from the everyday language spoken in the community. Listeners not only accept the (a) strange use of words, rearrangement of word order, assonance, alliteration, rhythm, rhyme, compression of thought, and so on — they actually expect to find these things in poetry and they are disappointed when poetry does not sound “poetic.” But those who regard poetry as a (b) different category of language altogether are deaf to the true achievements of the poet. Rather, the poet artfully manipulates the same raw materials of his language as are used in everyday speech; his skill is to find new possibilities in the resources already in the language. In much the same way that people living at the seashore become so accustomed to the sound of waves that they no longer hear it, most of us have become (c) sensitive to the flood tide of words, millions of them every day, that hit our eardrums. One function of poetry is to depict the world with a (d) fresh perception — to make it strange — so that we will listen to language once again. But the successful poet never departs so far into the strange world of language that none of his listeners can (e) follow him. He still remains the communicator, the man of speech.

Helen was thrilled when she received a notification on a second-hand shopping app from a seller named Anna. For months, she had been looking for a *Philodendron gloriosum*, a Colombian plant with dark, velvety leaves shaped like hearts. She had almost given up on getting one. Anna, though, had put one up for sale. The posting read, “(a) I’m selling my favorite plant, because I’m moving abroad. If you pick it up today from Edinchester Heights, you can have it for the current price, which is half the market rate.”

(B)

Arriving at the building, Helen could identify Julia by the large paper bag she was holding. The bag had leaves sticking out of the top. (b) She said, “You must be Julia!” Laughing, the woman said, “Yes! Please take good care of this plant. Anna had it for six years, so she considers it family.” From the bag, she pulled out another plant, a tiny one with thick, glossy leaves. “Are you familiar with this? It’s called a Dragon’s Tail. (c) My housemate said you could take it too, if you’d like.”

(C)

Helen immediately messaged the seller. “Hello! I’m interested in purchasing (d) your plant. If it works for your schedule, I can be there in 10 minutes!” Anna replied, “Hi, there! I am at work right now, but my housemate, Julia, can meet you in front of the building.” Unable to believe her good luck, Helen typed back in excitement, “Great! I can leave now. I’ll wear a black baseball cap.”

(D)

Helen exclaimed, “Yes, I’d love to! Please thank Anna for me. Both are in such wonderful condition. Do you have any tips for keeping them in good shape?” Handing over the bag, Julia replied, “I’m not a plant expert, but I know that Anna kept them away from windows to avoid direct sunlight. Why don’t you message (e) her? She would be happy to offer advice.” “I’ll be sure to do that,” Helen said, as she handed over the cash.
